The State Milk Board, in conjunction with the Missouri Department of Agriculture and the Missouri Department of Health and Senior Services, announced today milk products produced by Shatto Dairy of Osborn are being recalled.

Test results indicate levels of residual phosphatase above the standard for Grade "A" pasteurized milk after routine testing of samples collected on August 6th. Residual phosphatase may indicate potentially unpasteurized or improperly pasteurized milk, which can contain harmful pathogens that may lead to food borne illness. Individuals who have the products listed below should not consume those items. The products should be returned to the place of purchase or discarded.

Shatto Dairy's plant operations have been temporarily suspended, pending the results of the investigation by the State Milk Board and Missouri departments of Agriculture and Health and Senior Services.

The recalled milk is packaged in glass bottles of varying sizes and labeled Grade "A." Recalled products include:

Whole Milk, unflavored half gallon code date: Aug 19

2% Milk, unflavored pint code date: Aug 19

1% Milk, unflavored quart code date: Aug 20

Skim Milk, unflavored quart code date: Aug 19

Half and Half pint code date: Aug 19

Whole Milk, Cotton Candy flavor pint code date: Aug 20

Cream pint code date: Aug 17
